# Push-Lok® the intelligent solution for low pressure applications

Parker Push-Lok is the world leading self-grip low pressure hose and fitting system.

Parker Push-Lok®-System

## Development

High quality hose types and a comprehensive fittings programme for a wide spectrum of requirements are now available as a result of continuous customer-oriented product development.

A result of the latest product development is the 837PU-Plus hybrid hose. Thanks to a new patented manufacturing process Parker has succeeded in combining a polymer cover with a synthetic elastomer tube to produce a unique hose that meets the highest of application demands.

## Safety

The exact design match of hose and fittings combined with complete in-house production of all components allows excellent system safety and a pressure safety factor of 4 : 1

## The Benefits of the Push-Lok

### Features

### Advantages

Low bending forces required

Good and easy hose handling/routing

Push-Lok self-grip hose fittings

Easy on site assembly without auxiliary devices

Functional matching of hose and fittings

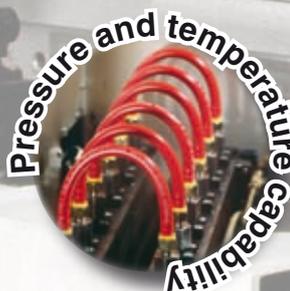

High product safety

A selection of high quality tube compounds

Wide ranging chemical compatibility

Large selection of colours

Easy visual identification

## A Choice of Hoses

### 9 hose types for a multitude of applications

- ▶ 6 rubber hoses
- ▶ 2 thermoplastic hoses
- ▶ 1 hybrid hose

### 6 different colours for

- ▶ optimal identification (size/medium/age...)
- ▶ easy workflow
- ▶ easy control of maintenance intervals
- ▶ simplified stock management
- ▶ attractive machine layout

## System

### Benefits

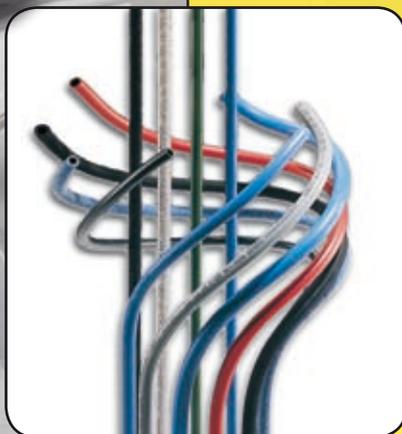

Long service life

Low assembly costs

Parker's product guarantee

Large variety of applications

Product code:  
Optimal media identification

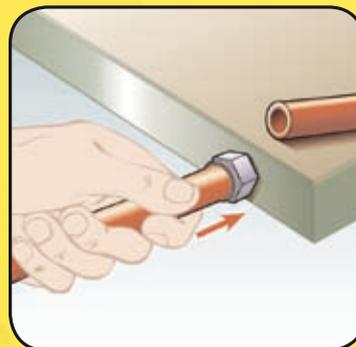

### One Fittings Program for all Push-Lok hoses

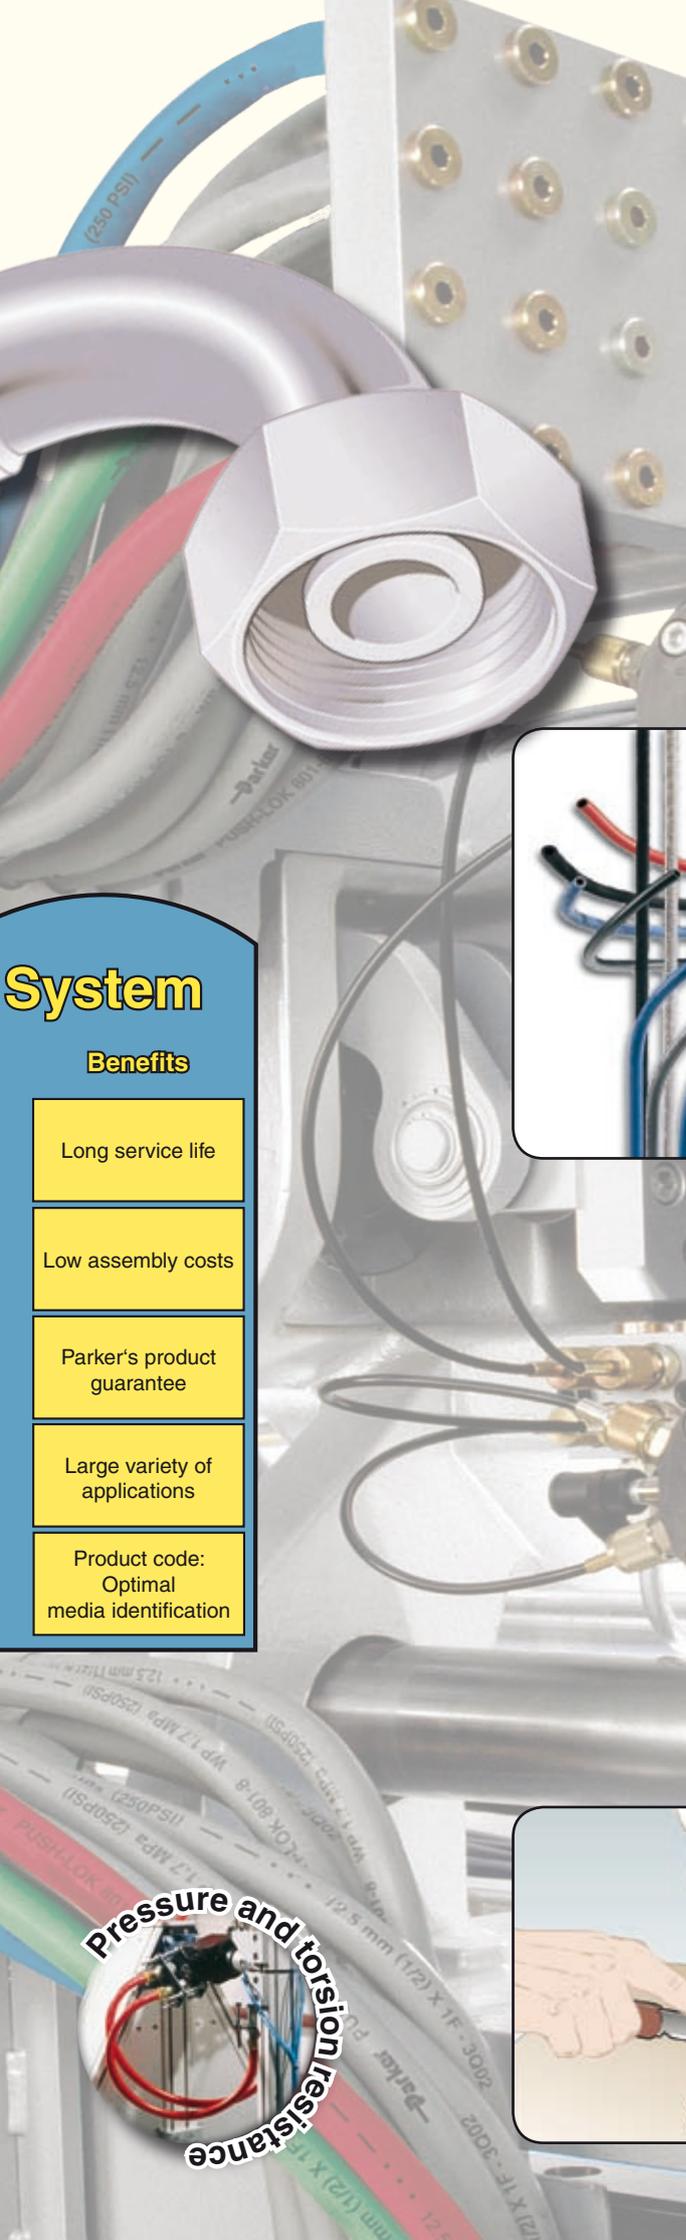

- ▶ including DIN, BSP, JIC and ORFS connections in brass, steel and stainless steel

### Simple Assembly without Tools or Clamps

- ▶ Squarely cut the hose with a sharp knife
- ▶ Push the nipple into the hose up to the yellow plastic ring – that's all!

Pressure and torsion resistance

# Push-Lok® for multiple applications

## Machine Tools

### ▶ Main applications

- Cooling and cutting fluid circuits
- Compressed air
- Leak oil

### ▶ Typical requirements

- Abrasive resistance for placing in energy chains
- Resistance to cutting oils, water, emulsions and hydraulic media
- Nick resistance at small bend radii
- Coloured versions for media identification

### ▶ Hose recommendation

- 830M, 837PU-Plus
- 831 for oil and oil emulsions, if temperature +70 °C up to +100 °C
- 836 for oil and oil emulsions, if temperature +100 °C up to +150 °C

## Paper Industry

### ▶ Main applications

- Water and emulsions
- Compressed air

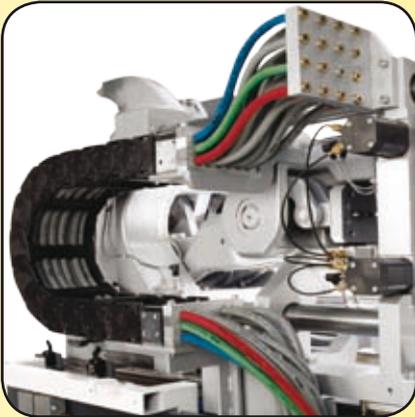

### ▶ Typical requirements

- Resistance to water emulsions
- Partial high temperature demands
- Good assembly characteristics for in-the-field operation

### ▶ Hose recommendation

- 801
- 836 for oil and oil emulsions, if temperature +70 °C up to +150 °C

## Injection Moulding Machines

### ▶ Main applications

- Water circuits for tool cooling and temperature control
- Compressed air
- Leak oil

### ▶ Typical requirements

- Abrasion resistance for placing in energy chains
- Resistance to water, emulsions and hydraulic media
- Nick resistance at small bend radii
- Coloured versions for media identification
- Good assembly characteristics for in-the-field operation

### ▶ Hose recommendation

- 837PU-*plus*
- 804 for water, if temperature +85 °C up to +93 °C

## Chemical Industry

### ▶ Main applications

- Water, emulsions and alkalis
- Compressed air

### ▶ Typical requirements

- Media resistance
- Coloured versions for media identification

### ▶ Hose recommendation

- 801, 830M
- 831 for oil and oil emulsions, if temperature +70 °C up to +100 °C

# Push-Lok® for multiple applications

## Transfer Lines (Automotive and other)

### ▶ Main applications

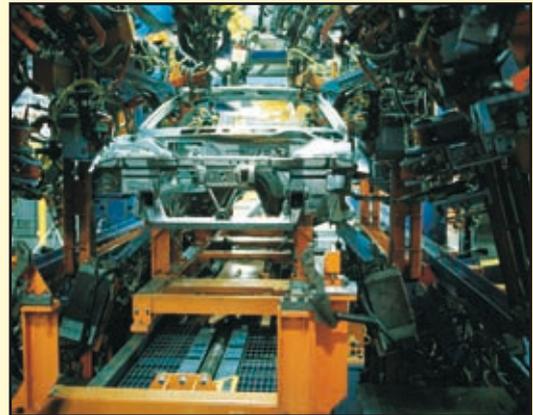

- Compressed air (dry and oiled)
- Vacuum

### ▶ Typical requirements

- Resistance to ultra-dry compressed air
- Vacuum- and nick-resistance at low bend radii
- Free from substances interfering with paint wetting
- Coloured versions for media identification
- Good assembly characteristics for in-the-field assembly

### ▶ Hose recommendation

- 801 (not automotive industry)
- 830M, 837BM, 837PU-*plus* (automotive industry)

## PET Blow Forming Machines

### ▶ Main applications

- Water circuits for tool cooling
- Compressed air

### ▶ Typical requirements

- Resistance to water and emulsions
- Abrasion and torsion resistance for highly dynamic machine processes
- Coloured versions for media identification

### ▶ Hose recommendation

- 830M, 837PU-*plus*

## Robots and Welding Installations

### ▶ Main applications

- Water circuits for welding gun cooling
- Compressed air (ultra-dry compressed air)
- Vacuum

### ▶ Typical requirements

- Resistance to ultra-dry compressed air, water and emulsions
- Abrasion and torsion resistance for laying in hose and cable bundles
- Vacuum and nick resistance at low bend radii
- Resistance to weld spatter
- Free from substances interfering with paint wetting
- Coloured versions for media identification

### ▶ Hose recommendation

- 830M, 837PU-Plus

## Power Electronics

### ▶ Main applications

- Cooling circuits for thyristor controls

### ▶ Typical requirements

- High electrical resistance
- Special colour identification
- Resistance to water and emulsions

### ▶ Hose recommendation

- 838M

# 801 – Push-Lok Hose

for a variety of applications

## Main Features

- Very flexible
- Wide range of colours
- Available up to size -16

## Primary Applications/Restrictions

**All Markets:** For low demanding applications  
**Paper and Pulp:** For water / air applications  
*Not permitted for use in air brake systems.*  
*Not suitable for high dynamic pulsation systems.*  
*Not recommended for motor fuels.*

## Hose Construction

**Tube:** Synthetic rubber  
**Reinforcement:** High tensile textile layer  
**Cover:** High performance synthetic rubber in different colours

## Recommended Fluids

Air, dry air, water, water-oil-emulsions and water-glycol-emulsions. (Mineral based hydraulic and lubricating oils with chemical and thermal (70 °C) restriction). Consult the chemical compatibility section on pages 50–55 for more detailed information.

## Temperature Range

-40 °C up to +100 °C  
 Exception: Air ..... max. +70 °C  
 Water ..... max. +85 °C

## Fittings Series

XXXX-XX-XX Part Number	Hose I.D.				Hose O.D. mm	Pressure rating				Vaccum kilo Pascal*1 kPa	min. bend radius mm	Weight kg/m
	DN	Inch	Size	mm		max. dynamic working pressure MPa	psi	min. burst pressure MPa	psi			
801-4-XXX-RL	6	1/4	-4	6,3	12,7	1,7	250	6,8	1000	95	65	0,13
801-6-XXX-RL	10	3/8	-6	9,5	15,9	1,7	250	6,8	1000	95	75	0,16
801-8-XXX-RL	12	1/2	-8	12,7	19,8	1,7	250	6,8	1000	95	130	0,27
801-10-XXX-RL	16	5/8	-10	15,9	23,0	1,7	250	6,8	1000	51	150	0,28
801-12-XXX-RL	20	3/4	-12	19,1	26,2	1,7	250	6,8	1000	51	180	0,36
801-16-XXX-RL	25	1	-16	25,4	32,5	1,2	175	4,8	700	51	250	0,55

\*1 = the vacuum values listed in the table are vacuum pressure values in kPa. For an absolute value subtract the table value from 101 kPa  
 Note: when ordering, specify Push-Lok hose part number, followed by size, followed by colour. Example: 801-4-XXX-RL

- XXX = BLK = black  
 BLU = blue  
 RED = red  
 GRN = green  
 GRA = grey

Example: 801-4-GRN-RL (green)  
 RL = only available on reels

801-16-XXX-RL is only available in grey or black.

Information about standard products or non-standard products can be found in the current price list.  
 Dimensions shown may be changed at any time without prior notice.

# 804 – Push-Lok Hose

for high temperature water / phosphate ester fluid

## Main Features

- For hot water up to +93 °C
- For phosphate-ester fluids

## Primary Applications/Restrictions

**Injection Moulding:** For special temper circuits  
*Not permitted for use in air brake systems.*  
*Not suitable for high dynamic pulsation systems.*  
*Do not allow tube to contact any petroleum based fluids.*

## Hose Construction

**Tube:** EPDM material  
**Reinforcement:** High tensile textile layer  
**Cover:** Black EPDM material

## Recommended Fluids

Phosphate ester based hydraulic fluids, water, water glycol emulsions, air. Use liquid soap as lubricant. Consult the chemical compatibility section on pages 50-55 for more detailed information.

## Temperature Range

up to +80 °C  
 Exception: Air ..... max. +70 °C  
 Water ..... max. +93 °C

## Fittings Series

Part Number XXXX-XX-XX	Hose I.D.				Hose O.D. mm	Pressure rating				min. bend radius mm	Weight kg/m
	Hose I.D.					max. dynamic working pressure		min. burst pressure

# 821FR – Push-Lok Hose

with fire retardant hose cover

## Main Features

- Fire retardant hose cover
- Very flexible
- For high level air temperatures

## Primary Applications/Restrictions

**All Markets:** For a variety of applications  
*Not permitted for use in air brake systems.*  
*Not suitable for high dynamic pulsation systems.*  
*Not recommended for motor fuels.*

## Hose Construction

**Tube:** Synthetic PKR-rubber  
**Reinforcement:** High tensile textile layer  
**Cover:** A fire retardant special fiber outer cover

## Recommended Fluids

Mineral based hydraulic and lubricating oils, coolant, antifreeze, air, water and water-oil emulsions. Consult the chemical compatibility section on pages 50-55 for more detailed information.

## Temperature Range

-40 °C up to +100 °C  
 Exception: Air .....max. +100 °C  
 Water .....max. +85 °C

## Fittings Series

XXXX-XX-XX Part Number	Hose I.D.				Hose O.D. mm	Pressure rating				Vacuum kilo Pascal*1 kPa	min. bend radius mm	Weight kg/m

 Dimensions shown may be changed at any time without prior notice.

# 830M – Push-Lok Hose

for a variety of applications including automotive

## Main Features

- Chemical resistant for a wide range of fluids
- High abrasion resistance
- Free of wetting disturbing substances
- Small O.D. and bend radii

## Primary Applications/Restrictions

**All Markets:** For a variety of applications

**Robot and Automotive market:**

For hose bundle systems

*Not permitted for use in air brake systems.*

*Not suitable for high dynamic pulsation systems.*

*Not recommended for motor fuels.*

## Hose Construction

**Tube:** Polyurethane material

**Reinforcement:** High tensile textile layer

**Cover:** High performance polyurethane material in different colours

## Recommended Fluids

Mineral based hydraulic and lubricating oils, coolant, antifreeze, air, water and water-oil emulsions.

Consult the chemical compatibility section on pages 50-55 for more detailed information.

**Temperature Range** -40 °C up to +80 °C

## Fittings Series

Part Number XXXX-XX-XX	Hose I.D.				Hose O.D. mm	Pressure rating				Vacuum kilo Pascal*1 kPa	min. bend radius mm	Weight kg/m

# 831 – Push-Lok Hose

ideal for petroleum based fluids

## Main Features

- Max. working pressure up to 2,4 MPa
- High temperature level for petroleum based fluids
- Nitrile (NBR) inner tube – extended fluid compatibility

## Primary Applications/Restrictions

**All Markets:** For a wide range of fluids  
*Not permitted for use in air brake systems.*  
*Not suitable for high dynamic pulsation systems.*  
*Not recommended for motor fuels.*

## Hose Construction

**Tube:** Synthetic rubber  
**Reinforcement:** High tensile textile layer  
**Cover:** High performance synthetic rubber in different colours

## Recommended Fluids

Mineral based hydraulic and lubricating oils, coolant, antifreeze, air, water and water-oil emulsions. Consult the chemical compatibility section on pages 50-55 for more detailed information.

## Temperature Range

-40 °C up to +100 °C  
 Exception: Air ..... max. +70 °C  
 Water ..... max. +85 °C

## Fittings Series

# 836 – Push-Lok Hose

for high oil temperatures

## Main Features

- Max. oil temperature up to +150 °C
- Blue hose cover

## Primary Applications/Restrictions

**All Markets:** Special high temperature applications

*Not permitted for use in air brake systems.*

*Not suitable for high dynamic pulsation systems.*

*Not recommended for motor fuels.*

## Hose Construction

**Tube:** Synthetic PKR rubber

**Reinforcement:** High tensile textile layer

**Cover:** Blue synthetic PKR rubber

## Recommended Fluids

Mineral based hydraulic and lubricating oils, coolant, antifreeze, air, water and water-oil emulsions. Consult the chemical compatibility section on pages 50-55 for more detailed information.

## Temperature Range

-48 °C up to +150 °C

Exception: Air ..... max. +100 °C

Water ..... max. +85 °C

## Fittings Series

Part Number XXXX-XX-XX	Hose I.D.				Hose O.D. mm	Pressure rating				Vacuum kilo Pascal*1 kPa	min. bend radius mm	Weight kg/m

RL = only available on reels

# 837BM – Push-Lok Hose

for a variety of applications including automotive

## Main Features

- High level of hose flexibility
- High abrasion resistant
- Free of wetting disturbing substances
- Low push-in forces

## Primary Applications/Restrictions

**All Markets:** For a variety of applications

**Automotive:** For water / air applications

*Not permitted for use in air brake systems.*

*Not suitable for high dynamic pulsation systems.*

*Not recommended for motor fuels.*

## Hose Construction

**Tube:** Synthetic rubber

**Reinforcement:** High tensile textile layer

**Cover:** High performance synthetic rubber in different colours

## Recommended Fluids

Air, dry air, water, water-oil-emulsions and water-glycol-emulsions. (Mineral based hydraulic and lubricating oils with chemical and thermal (70 °C) restriction).

Consult the chemical compatibility section on pages 50–55 for more detailed information.

**Temperature Range** -40 °C up to +100 °C

Exception: Air ..... max. +70 °C

Water ..... max. +85 °C

## Fittings Series

XXXX-XX-XX Part Number	Hose I.D.				Hose O.D. mm	Pressure rating				Vacuum kilo Pascal*1 kPa	min. bend radius mm	Weight kg/m

GRN = green

GRA = grey

Example: 837BM-4-GRN-RL (green)

RL = only available on reels

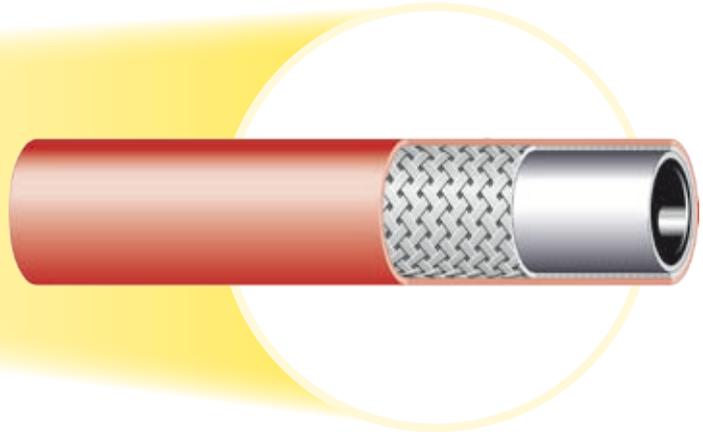

Information about standard products or non-standard products can be found in the current price list. Dimensions shown may be changed at any time without prior notice.

# 837PU-Plus – Hybrid Push-Lok Hose

for a variety of applications including automotive

## Main Features

- High level of hose flexibility
- High abrasion resistance
- High torsion resistance
- Free of wetting disturbing substances
- Low push-in forces

## Primary Applications/Restrictions

**All Markets:** For high demanding applications  
For energy chain systems

**Robot and Automotive market:**  
For hose bundle systems

*Not permitted for use in air brake systems.  
Not suitable for high dynamic pulsation systems.  
Not recommended for motor fuels.*

## Hose Construction

**Tube:** Synthetic rubber  
**Reinforcement:** High tensile textile layer  
**Cover:** High performance polyurethane material in different colours

## Recommended Fluids

Air, dry air, water, water-oil-emulsions and water-glycol-emulsions. (Mineral based hydraulic and lubricating oils with chemical and thermal (70 °C) restriction). Consult the chemical compatibility section on pages 50–55 for more detailed information.

## Temperature Range

-40 °C up to +100 °C

Exception: Air ..... max. +70 °C  
Water ..... max. +85 °C

## Fittings Series

Part Number	Hose I.D.				Hose O.D. mm	Pressure rating				Vacuum kilo Pascal*1 kPa	min. bend radius mm	Weight kg/m
	DN	Inch	Size	mm		max. dynamic working pressure MPa	psi	min. burst pressure MPa	psi

# 838M – Push-Lok Hose

for non conductive applications

## Main Features

- Non conductive hose

## Primary Applications/Restrictions

**Special Market:** For special electrical requirements  
*Not permitted for use in air brake systems.*  
*Not suitable for high dynamic pulsation systems.*  
*Not recommended for motor fuels.*

## Hose Construction

**Tube:** Polyurethane material  
**Reinforcement:** High tensile textile layer  
**Cover:** Orange coloured Polyurethane material

## Recommended Fluids

Mineral based hydraulic and lubricating oils, coolant, antifreeze, water, water-oil emulsions.  
 Consult the chemical compatibility section on pages 50-55 for more detailed information.

**Temperature Range** -40 °C up to +80 °C

B & BK parts have brass nipples and steel nuts.  
Standard nipples are stocked without plastic collar. If you need a collar, delete K from the part number.

Information about standard products or non-standard products can be found in the current price list.  
Dimensions shown may be changed at any time without prior notice.

**DR – Metric Swivel Female Tee**

Approved fitting series for hose types:

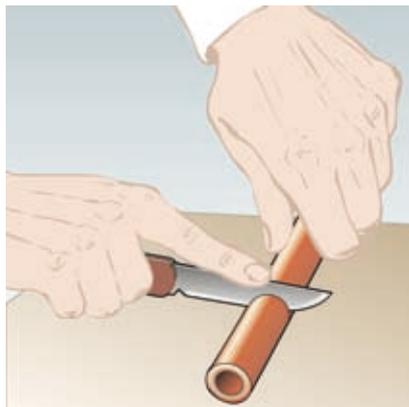

Part Number 	Hose I.D.				Thread metric	A mm	B mm	E mm	F mm	H mm	W mm
	DN	Inch	Size	mm							
DR-6-4-4BK	6	1/4	-4	6,3	M12x1	54	24	30	30	11	14
DR-10-6-6BK	10	3/8	-6	9,5	M16x1,5	59	25	34	34	13	19
DR-15-8-8BK	12	1/2	-8	12,7	M22x1,5	74	32	42	42	17	27

Material: Steel, zinc plated  
B = Brass  
C = Stainless Steel  
K = Without plastic ring

Information about standard products or non-standard products can be found in the current price list.  
Dimensions shown may be changed at any time without prior notice.

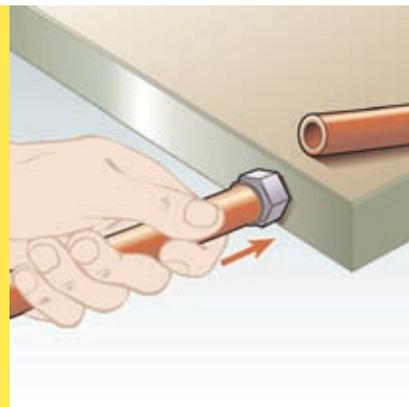

## Assembly Instructions

1. Cut the hose right angled with a sharp knife. If necessary it is possible to use a lubricant (water/ soap solution with 5 % soap fluid and 95 % water) for easy assembly.

2. Insert fitting into hose until first barb is in hose. Place end of fitting against a flat object (bench, door, wall) and grip hose approximately 1" from end and push with a steady force until end of hose is covered by yellow plastic collar. Alternatively please use the Parker Assembly Tool No. 611050G.

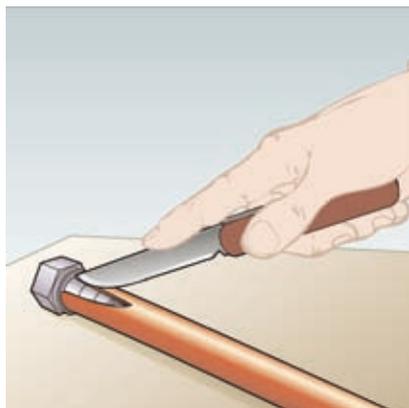

### Attention!

During assembly, please keep in mind that Push-Lok fittings will provide an effective grip only when the Push-Lok hose is pushed fully on the insert, where the cropped end of the hose should be fully concealed by the plastic collar.

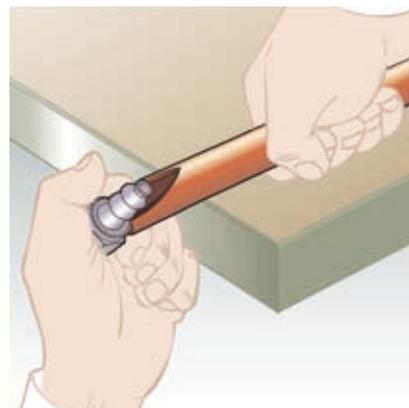

**For easy assembly of hose 830M, 837BM and 837PU please use only Push-Lok Assembly Oil No. H896137.** Push-Lok Assembly Oil is free from wetting disturbing substances. Don't use oil, lubricant or soap fluids for this hose!

## Disassembly Instructions

1. Cut lengthwise along a line at approximately a 20 angle from centre line of hose. The cut should be approximately 1" long. Be careful not to nick barbs when cutting the hose.

2. Grip hose and give a sharp down-ward tug to disengage from fitting.

### Attention!

Before re-use of the nipple please check nipple for damage. Damaged nipples can cause leakage.

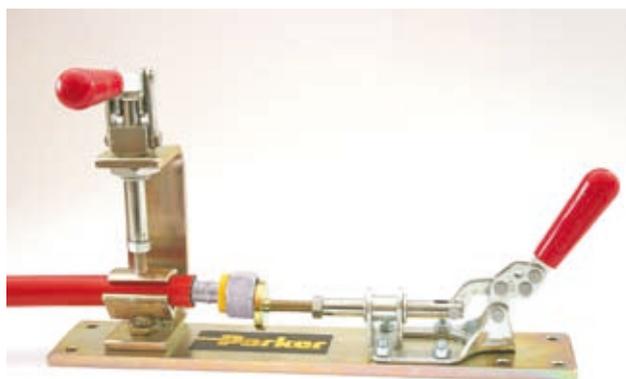

### Assembly Tool

Tool designed for assembly of Push-Lok® fittings and hose in all sizes. Toggle actions greatly reduce effort necessary to hold hose and press in fitting. Only a few pounds of force is needed on either handle to quickly assemble any size. Overall length: 320 mm, Weight: ca. 2,2 kg

Part-No.: 611050G

**Push-Lok® Assembly Oil H896137**  
 1-litre bottle Part-No.: H896137

## Hose Selection by Medium and Hose Type

This hose compatibility chart is a ready reference of Parker hose compatibility with various fluid media. It is intended as a guide to chemical compatibility with inner tube materials and assembly lubricant applied internally. The specific recommendations are based upon field experience, the advice of various polymer or fluid suppliers, and specific laboratory experiments. It must be stressed, however, that this information is offered only as a guide. Final hose selection depends also upon pressure, fluid temperature, ambient temperature, and special requirements or variations, which may not be known by Parker Hannifin. Legal and other regulations applicable to footnotes must be followed with particular care. Where an external compatibility problem may occur, or for fluids not listed, we encourage you to first contact the fluid manufacturer for a recommendation prior to contacting your Parker Hannifin representative.

### Use the Chart as Follows:

1. Locate medium to be carried.
2. Select suitability of hose and fitting material, using the Chemical Resistance Table on the following pages. See resistance rating key below for explanation of compatibility ratings.
3. The Column headings on the Chemical Resistance Table, refer to specific groups of hoses.
4. For fitting material availability refer to appropriate fitting selection of catalog.
5. Check hose specifications in this catalog. Contact Hose Division Technical Service Department on any items not cataloged.

### Resistance Rating Key

- A = Preferred, good to excellent with little or no change in physical properties.  
F = Fair, marginal or conditional with noticeable affects on physical properties.  
X = Unsuitable, severe affects on physical properties.  
~ = No rating, insufficient information.

### Numerals

- (2) Legal and insurance regulations must be considered. Contact Technical Service Department for more information.
- (3) Push-Lok hoses are not recommended for fuels
- (5) Maximum 65 °C (150 °F)
- (6) The hose resistance depends on medium concentration and temperature
- (7) Recommended hose type for phosphate ester fluids: 804
- (8) Acceptable for flushing hose assemblies
- (10) For dry air applications the following hose types are recommended: 801, 804, 821FR, 830M, 837BM, 837PU.  
Please take note of the temperatures for air under paragraph „Temperature Range“ on the relevant catalogue page.
- (11) Maximum 100 °C (212 °F)
- (12) Maximum 121 °C (250 °F)
- (15) Maximum 70 °C (145 °F) for hose types: 801, 837BM, 837PU
- (16) No chemical resistance classification for the following hose types: 801, 831BM, 837PU

## Parker Safety Guide for Selecting and Using Hose, Tubing, Fittings and Related Accessories

Parker Publication No. 4400-B.1-EUR

Revised: March, 2005

### WARNING

Failure or improper selection or improper use of hose, tubing, fittings, assemblies or related accessories ("Products") can cause death, personal injury and property damage. Possible consequences of failure or improper selection or improper use of these Products include but are not limited to:

- Fittings thrown off at high speed.
- High velocity fluid discharge.
- Explosion or burning of the conveyed fluid.
- Electrocutation from high voltage electric powerlines.
- Contact with suddenly moving or falling objects that are controlled by the conveyed fluid.
- Injections by high-pressure fluid discharge.
- Dangerously whipping Hose.
- Contact with conveyed fluids that may be hot, cold, toxic or otherwise injurious.
- Sparking or explosion caused by static electricity buildup or other sources of electricity.
- Sparking or explosion while spraying paint or flammable liquids.
- Injuries resulting from inhalation, ingestion or exposure to fluids.

Before selecting or using any of these Products, it is important that you read and follow the instructions below. Only Hose from Parker's Stratoflex Products Division is approved for in flight aerospace applications, and no other Hose can be used for such in flight applications.

## 1.0 GENERAL INSTRUCTIONS

### 1.1 Scope

This safety guide provides instructions for selecting and using (including assembling, installing, and maintaining) these Products. For convenience, all rubber and/or thermoplastic products commonly called "hose" or "tubing" are called "Hose" in this safety guide. All assemblies made with Hose are called "Hose Assemblies". All products commonly called "fittings" or "couplings" are called "Fittings". All related accessories (including crimping and swaging machines and tooling) are called "Related Accessories". This safety guide is a supplement to and is to be used with, the specific Parker publications for the specific Hose, Fittings and Related Accessories that are being considered for use.

### 1.2 Fail-Safe

Hose, and Hose Assemblies and Fittings can and do fail without warning for many reasons. Design all systems and equipment in a failsafe mode, so that failure of the Hose or Hose Assembly or Fitting will not endanger persons or property.

### 1.3 Distribution

Provide a copy of this safety guide to each person that is responsible for selecting or using Hose and Fitting products. Do not select or use Parker Hose or Fittings without thoroughly reading and understanding this safety guide as well as the specific Parker publications for the products considered or selected.

### 1.4 User Responsibility

Due to the wide variety of operating conditions and applications for Hose and Fittings, Parker and its distributors do not represent or warrant that any particular Hose or Fitting is suitable for any specific end use system. This safety guide does not analyze all technical parameters that must be considered in selecting a product. The user, through its own analysis and testing, is solely responsible for:

- Making the final selection of the Hose and Fitting.
- Assuring that the user's requirements are met and that the application presents no health or safety hazards.
- Providing all appropriate health and safety warnings on the equipment on which the Hose and Fittings are used.
- Assuring compliance with all applicable government and industry standards.

### 1.5 Additional Questions

Call the appropriate Parker technical service department if you have any questions or require any additional information. See the Parker publication for the product being considered or used, or call 00-800-2727-5374, or go to [www.parker.com](http://www.parker.com), for telephone numbers of the appropriate technical service department.

## 2.0 HOSE AND FITTING SELECTION INSTRUCTIONS

### 2.1 Electrical Conductivity

Certain applications require that the Hose be nonconductive to prevent electrical current flow. Other applications require the Hose and the Fitting and the Hose/Fitting interface to be sufficiently conductive to drain off static electricity. Extreme care must be exercised when selecting Hose and Fittings for these or any other applications in which electrical

conductivity or nonconductivity is a factor. The electrical conductivity or nonconductivity of Hose and Fittings is dependent upon many factors and may be susceptible to change. These factors include but are not limited to the various materials used to make the Hose and the Fittings, Fitting finish (some Fitting finishes are electrically conductive while others are nonconductive), manufacturing methods (including moisture control), how the Fittings contact the Hose, age and amount of deterioration or damage or other changes, moisture content of the Hose at any particular time, and other factors. The following are considerations for electrically nonconductive and conductive Hose. For other applications consult the individual catalog pages and the appropriate industry or regulatory standards for proper selection.

#### 2.1.1 Electrically Nonconductive Hose

Certain applications require that the Hose be nonconductive to prevent electrical current flow or to maintain electrical isolation. For these applications that require Hose to be electrically nonconductive, including but not limited to applications near high voltage electric lines, only special nonconductive Hose can be used. The manufacturer of the equipment in which the nonconductive Hose is to be used must be consulted to be certain that the Hose and Fittings that are selected are proper for the application. Do not use any Parker Hose or Fitting for any such application requiring nonconductive Hose, including but not limited to applications near high voltage electric lines, unless (i) the application is expressly approved in the Parker technical publication for the product, (ii) the Hose is marked "nonconductive", and (iii) the manufacturer of the equipment on which the Hose is to be used specifically approves the particular Parker Hose and Fitting for such use.

#### 2.1.2 Electrically Conductive Hose

Parker manufactures special Hose for certain applications that require electrically conductive Hose. Parker manufactures special Hose for conveying paint in airless paint spraying applications. This Hose is labeled "Electrically Conductive Airless Paint Spray Hose" on its layline and packaging. This Hose must be properly connected to the appropriate Parker Fittings and properly grounded in order to dissipate dangerous static charge buildup, which occurs in all airless paint spraying applications. Do not use any other Hose for airless paint spraying, even if electrically conductive. Use of any other Hose or failure to properly connect the Hose can cause a fire or an explosion resulting in death, personal injury, and property damage. Parker manufactures a special Hose for certain compressed natural gas ("CNG") applications where static electricity buildup may occur. Parker CNG Hose assemblies comply with AGA Requirements 1-93, "Hoses for Natural Gas Vehicles and Fuel Dispensers". This Hose is labeled "Electrically Conductive for CNG Use" on its layline and packaging. This Hose must be properly connected to the appropriate Parker Fittings and properly grounded in order to dissipate dangerous static charge buildup, which occurs in, for example, high velocity CNG dispensing or transfer. Do not use any other Hose for CNG applications where static charge buildup may occur, even if electrically conductive. Use of other Hoses in CNG applications or failure to properly connect or ground this Hose can cause a fire or an explosion resulting in death, personal injury, and property damage. Care must also be taken to protect against CNG

permeation through the Hose wall. See section 2.6, Permeation, for more information. Parker CNG Hose is intended for dispenser and vehicle use at a maximum temperature of 82°C / 180°F. Parker CNG Hose should not be used in confined spaces or unventilated areas or areas exceeding 82°C / 180°F. Final assemblies must be tested for leaks. CNG Hose Assemblies should be tested on a monthly basis for conductivity per AGA 1-93. Parker manufacturers special Hose for aerospace in flight applications. Aerospace in flight applications employing Hose to transmit fuel, lubricating fluids and hydraulic fluids require a special Hose with a conductive inner tube. This Hose for in flight applications is available only from Parker's Stratoflex Products Division. Do not use any other Parker Hose for in flight applications, even if electrically conductive. Use of other Hoses for in flight applications or failure to properly connect or ground this Hose can cause a fire or an explosion resulting in death, personal injury, and property damage. These Hose assemblies for in flight applications must meet all applicable aerospace industry, aircraft engine, and aircraft requirements.

## 2.2 Pressure

Hose selection must be made so that the published maximum recommended working pressure of the Hose is equal to or greater than the maximum system pressure. Surge pressures or peak transient pressures in the system must be below the published maximum working pressure for the Hose. Surge pressures and peak pressures can usually only be determined by sensitive electrical instrumentation that measures and indicates pressures at millisecond intervals. Mechanical pressure gauges indicate only average pressures and cannot be used to determine surge pressures or peak transient pressures. Published burst pressure ratings for Hose is for manufacturing test purposes only and is no indication that the Product can be used in applications at the burst pressure or otherwise above the published maximum recommended working pressure.

## 2.3 Suction

Hoses used for suction applications must be selected to insure that the Hose will withstand the vacuum and pressure of the system. Improperly selected Hose may collapse in suction application.

## 2.4 Temperature

Be certain that fluid and ambient temperatures, both steady and transient, do not exceed the limitations of the Hose. Temperatures below and above the recommended limit can degrade Hose to a point where a failure may occur and release fluid. Properly insulate and protect the Hose Assembly when routing near hot objects (e.g. manifolds). Do not use any Hose in any application where failure of the Hose could result in the conveyed fluids (or vapors or mist from the conveyed fluids) contacting any open flame, molten metal, or other potential fire ignition source that could cause burning or explosion of the conveyed fluids or vapors.

## 2.5 Fluid Compatibility

Hose Assembly selection must assure compatibility of the Hose tube, cover, reinforcement, and Fittings with the fluid media used. See the fluid compatibility chart in the Parker publication for the product being considered or used. This information is offered only as a guide. Actual service life can only be determined by the end user by testing under all extreme conditions and other analysis. Hose that is chemically compatible with a particular fluid must be assembled using Fittings and adapters containing likewise compatible seals.

## 2.6 Permeation

Permeation (that is, seepage through the Hose) will occur from inside the Hose to outside when Hose is used with gases, liquid and gas fuels, and refrigerants (including but not limited to such materials as helium, diesel fuel, gasoline, natural gas, or LPG). This permeation may result in high concentrations of vapors which are potentially flammable, explosive, or toxic, and in loss of fluid. Dangerous explosions, fires, and other hazards can result when using the wrong Hose for such applications. The system designer must take into account the fact that this permeation will take place and must not use Hose if this permeation could be hazardous. The system designer must take into account all legal, government, insurance, or any other special regulations which govern the use of fuels and refrigerants. Never use a Hose even though the fluid compatibility is acceptable without considering the potential hazardous effects that can result from permeation through the Hose Assembly. Permeation of moisture from outside the Hose to inside the Hose will also occur in Hose assemblies, regardless of internal pressure. If this moisture permeation would have detrimental effects (particularly, but not limited to refrigeration and air conditioning systems), incorporation of sufficient drying capacity in the system or other appropriate system safeguards should be selected and used.

## 2.7 Size

Transmission of power by means of pressurized fluid varies with pressure and rate of flow. The size of the components must be adequate to keep pressure losses to a minimum and avoid damage due to heat generation or excessive fluid velocity.

## 2.8 Routing

Attention must be given to optimum routing to minimize inherent problems (kinking or flow restriction due to Hose collapse, twisting of the Hose, proximity to hot objects or heat sources).

## 2.9 Environment

Care must be taken to insure that the Hose and Fittings are either compat-

ible with or protected from the environment (that is, surrounding conditions) to which they are exposed. Environmental conditions including but not limited to ultraviolet radiation, sunlight, heat, ozone, moisture, water, salt water, chemicals, and air pollutants can cause degradation and premature failure.

## 2.10 Mechanical Loads

External forces can significantly reduce Hose life or cause failure. Mechanical loads which must be considered include excessive flexing, twist, kinking, tensile or side loads, bend radius, and vibration. Use of swivel type Fittings or adapters may be required to insure no twist is put into the Hose. Unusual applications may require special testing prior to Hose selection.

## 2.11 Physical Damage

Care must be taken to protect Hose from wear, snagging, kinking, bending smaller than minimum bend radius, and cutting, any of which can cause premature Hose failure. Any Hose that has been kinked or bent to a radius smaller than the minimum bend radius, and any Hose that has been cut or is cracked or is otherwise damaged, should be removed and discarded.

## 2.12 Proper End Fitting

See instructions 3.2 through 3.5. These recommendations may be substantiated by testing to industry standards such as EN853, EN854, EN857, ISO17165-2, SAE J517 for hydraulic applications, or MIL-A-5070, AS1339, or AS3517 for Hoses from Parker's Stratoflex Products Division for aerospace applications.

## 2.13 Length

When establishing a proper Hose length, motion absorption, Hose length changes due to pressure, and Hose and machine tolerances and movement must be considered.

## 2.14 Specifications and Standards

When selecting Hose and Fittings, government, industry, and Parker specifications and recommendations must be reviewed and followed as applicable.

## 2.15 Hose Cleanliness

Hose components may vary in cleanliness levels. Care must be taken to insure that the Hose Assembly selected has an adequate level of cleanliness for the application.

## 2.16 Fire Resistant Fluids

Some fire resistant fluids that are to be conveyed by Hose require use of the same type of Hose as used with petroleum base fluids. Some such fluids require a special Hose, while a few fluids will not work with any Hose at all. See instructions 2.5 and 1.5. The wrong Hose may fail after a very short service. In addition, all liquids but pure water may burn fiercely under certain conditions, and even pure water leakage may be hazardous.

## 2.17 Radiant Heat

Hose can be heated to destruction without contact by such nearby items as hot manifolds or molten metal. The same heat source may then initiate a fire. This can occur despite the presence of cool air around the Hose.

## 2.18 Welding or Brazing

When using a torch or arc-welder in close proximity to hydraulic lines, the hydraulic lines should be removed or shielded with appropriate fire resistant materials. Flame or weld spatter could burn through the Hose and possibly ignite escaping fluid resulting in a catastrophic failure. Heating of plated parts, including Hose Fittings and adapters, above 450°F (232°C) such as during welding, brazing, or soldering may emit deadly gases.

## 2.19 Atomic Radiation

Atomic radiation affects all materials used in Hose assemblies. Since the long-term effects may be unknown, do not expose Hose assemblies to atomic radiation.

## 2.20 Aerospace Applications

The only Hose and Fittings that may be used for in flight aerospace applications are those available from Parker's Stratoflex Products Division. Do not use any other Hose or Fittings for in flight applications. Do not use any Hose or Fittings from Parker's Stratoflex Products Division with any other Hose or Fittings, unless expressly approved in writing by the engineering manager or chief engineer of Stratoflex Products Division and verified by the user's own testing and inspection to aerospace industry standards.

## 2.21 Unlocking Couplings

Ball locking couplings or other couplings with disconnect sleeves can unintentionally disconnect if they are dragged over obstructions or if the sleeve is bumped or moved enough to cause disconnect. Threaded couplings should be considered where there is a potential for accidental uncoupling.

## 3.0 HOSE AND FITTING ASSEMBLY AND INSTALLATION INSTRUCTIONS

### 3.1 Component Inspection

Prior to assembly, a careful examination of the Hose and Fittings must be performed. All components must be checked for correct style, size, catalog number, and length. The Hose must be examined for cleanliness, obstructions, blisters, cover looseness, kinks, cracks, cuts or any other visible defects. Inspect the Fitting and sealing surfaces for burrs, nicks, corrosion or other imperfections. Do NOT use any component that displays any signs of nonconformance.

### 3.2 Hose and Fitting Assembly

Do not assemble a Parker Fitting on a Parker Hose that is not specifically

listed by Parker for that Fitting, unless authorized in writing by the engineering manager or chief engineer of the appropriate Parker division. Do not assemble a Parker Fitting on another manufacturer's Hose or a Parker Hose on another manufacturer's Fitting unless (i) the engineering manager or chief engineer of the appropriate Parker division approves the Assembly in writing or that combination is expressly approved in the appropriate Parker literature for the specific Parker product, and (ii) the user verifies the Assembly and the application through analysis and testing. For Parker Hose that does not specify a Parker Fitting, the user is solely responsible for the selection of the proper Fitting and Hose Assembly procedures. See instruction 1.4. The Parker published instructions must be followed for assembling the Fittings on the Hose. These instructions are provided in the Parker Fitting catalog for the specific Parker Fitting being used, or by calling 00-800-2727-5374, or at www.parker.com.

### 3.3 Related Accessories

Do not crimp or swage any Parker Hose or Fitting with anything but the listed swage or crimp machine and dies in accordance with Parker published instructions. Do not crimp or swage another manufacturer's Fitting with a Parker crimp or swage die unless authorized in writing by the engineering manager or chief engineer of the appropriate Parker division.

### 3.4 Parts

Do not use any Parker Fitting part (including but not limited to socket, shell, nipple, or insert) except with the correct Parker mating parts, in accordance with Parker published instructions, unless authorized in writing by the engineering manager or chief engineer of the appropriate Parker division.

### 3.5 Reusable/Permanent

Do not reuse any field attachable (reusable) Hose Fitting that has blown or pulled off a Hose. Do not reuse a Parker permanent Hose Fitting (crimped or swaged) or any part thereof. Complete Hose Assemblies may only be reused after proper inspection under section 4.0. Do not assemble Fittings to any previously used hydraulic Hose that was in service, for use in a fluid power application.

### 3.6 Pre-Installation Inspection

Prior to installation, a careful examination of the Hose Assembly must be performed. Inspect the Hose Assembly for any damage or defects. Do NOT use any Hose Assembly that displays any signs of nonconformance.

### 3.7 Minimum Bend Radius

Installation of a Hose at less than the minimum listed bend radius may significantly reduce the Hose life. Particular attention must be given to preclude sharp bending at the Hose to Fitting juncture. Any bending during installation at less than the minimum bend radius must be avoided. If any Hose is kinked during installation, the Hose must be discarded.

### 3.8 Twist Angle and Orientation

Hose Assembly installation must be such that relative motion of machine components does not produce twisting.

### 3.9 Securement

In many applications, it may be necessary to restrain, protect, or guide the Hose to protect it from damage by unnecessary flexing, pressure surges, and contact with other mechanical components. Care must be taken to insure such restraints do not introduce additional stress or wear points.

### 3.10 Proper Connection of Ports

Proper physical installation of the Hose Assembly requires a correctly installed port connection insuring that no twist or torque is transferred to the Hose when the Fittings are being tightened or otherwise during use.

### 3.11 External Damage

Proper installation is not complete without insuring that tensile loads, side loads, kinking, flattening, potential abrasion, thread damage, or damage to sealing surfaces are corrected or eliminated. See instruction 2.10.

### 3.12 System Checkout

All air entrapment must be eliminated and the system pressurized to the maximum system pressure (at or below the Hose maximum working pressure) and checked for proper function and freedom from leaks. Personnel must stay out of potential hazardous areas while testing and using.

### 3.13 Routing

The Hose Assembly should be routed in such a manner so if a failure does occur, the escaping media will not cause personal injury or property damage. In addition, if fluid media comes in contact with hot surfaces, open flame, or sparks, a fire or explosion may occur. See section 2.4.

## 4.0 HOSE AND FITTING MAINTENANCE AND REPLACEMENT INSTRUCTIONS

### 4.1

Even with proper selection and installation, Hose life may be significantly reduced without a continuing maintenance program. The severity of the application, risk potential from a possible Hose failure, and experience with any Hose failures in the application or in similar applications should determine the frequency of the inspection and the replacement for the Products so that Products are replaced before any failure occurs. A maintenance program must be established and followed by the user and, at minimum, must include instructions 4.2 through 4.7.

### 4.2 Visual Inspection Hose/Fitting

Any of the following conditions require immediate shut down and replacement of the Hose Assembly:

- Fitting slippage on Hose,
- Damaged, cracked, cut or abraded cover (any reinforcement exposed);
- Hard, stiff, heat cracked, or charred Hose;
- Cracked, damaged, or badly corroded Fittings;
- Leaks at Fitting or in Hose;
- Kinked, crushed, flattened or twisted Hose; and
- Blistered, soft, degraded, or loose cover.

### 4.3 Visual Inspection All Other

The following items must be tightened, repaired, corrected or replaced as required:

- Leaking port conditions;
- Excess dirt buildup;
- Worn clamps, guards or shields; and
- System fluid level, fluid type, and any air entrapment.

### 4.4 Functional Test

Operate the system at maximum operating pressure and check for possible malfunctions and leaks. Personnel must avoid potential hazardous areas while testing and using the system. See section 2.2.

### 4.5 Replacement Intervals

Hose assemblies and elastomeric seals used on Hose Fittings and adapters will eventually age, harden, wear and deteriorate under thermal cycling and compression set. Hose Assemblies and elastomeric seals should be inspected and replaced at specific replacement intervals, based on previous service life, government or industry recommendations, or when failures could result in unacceptable downtime, damage, or injury risk. See section 1.2.

### 4.6 Hose Inspection and Failure

Hydraulic power is accomplished by utilizing high-pressure fluids to transfer energy and do work. Hoses, Fittings, and Hose Assemblies all contribute to this by transmitting fluids at high pressures. Fluids under pressure can be dangerous and potentially lethal and, therefore, extreme caution must be exercised when working with fluids under pressure and handling the Hoses transporting the fluids. From time to time, Hose Assemblies will fail if they are not replaced at proper time intervals. Usually these failures are the result of some form of misapplication, abuse, wear, or failure to perform proper maintenance. When Hoses fail, generally the high-pressure fluids inside escape in a stream which may or may not be visible to the user. Under no circumstances should the user attempt to locate the leak by "feeling" with their hands or any other part of their body. High-pressure fluids can and will penetrate the skin and cause severe tissue damage and possibly loss of limb. Even seemingly minor hydraulic fluid injection injuries must be treated immediately by a physician with knowledge of the tissue damaging properties of hydraulic fluid. If a Hose failure occurs, immediately shut down the equipment and leave the area until pressure has been completely released from the Hose Assembly. Simply shutting down the hydraulic pump may or may not eliminate the pressure in the Hose Assembly. Many times check valves, etc., are employed in a system and can cause pressure to remain in a Hose Assembly even when pumps or equipment are not operating. Tiny holes in the Hose, commonly known as pinholes, can eject small, dangerously powerful but hard to see streams of hydraulic fluid. It may take several minutes or even hours for the pressure to be relieved so that the Hose Assembly may be examined safely. Once the pressure has been reduced to zero, the Hose Assembly may be taken off the equipment and examined. It must always be replaced if a failure has occurred. Never attempt to patch or repair a Hose Assembly that has failed. Consult the nearest Parker distributor or the appropriate Parker division for Hose Assembly replacement information. Never touch or examine a failed Hose Assembly unless it is obvious that the Hose no longer contains fluid under pressure. The high-pressure fluid is extremely dangerous and can cause serious and potentially fatal injury.

### 4.7 Elastomeric seals

Elastomeric seals will eventually age, harden, wear and deteriorate under thermal cycling and compression set. Elastomeric seals should be inspected and replaced.

### 4.8 Refrigerant gases

Special care should be taken when working with refrigeration systems. Sudden escape of refrigerant gases can cause blindness if the escaping gases contact the eye and can cause freezing or other severe injuries if it contacts any other portion of the body.

### 4.9 Compressed natural gas (CNG)

Parker CNG Hose Assemblies should be tested after installation and before use, and at least on a monthly basis per AGA 1-93 Section

4.2 "Visual Inspection Hose/Fitting". The recommended procedure is to pressurize the Hose and check for leaks and to visually inspect the Hose for damage.

Caution: Matches, candles, open flame or other sources of ignition shall not be used for Hose inspection. Leak check solutions should be rinsed off after use.

## Parker Hannifin Corporation

### About Parker Hannifin Corporation

Parker Hannifin is a leading global motion-control company dedicated to delivering premier customer service.

A Fortune 500 corporation listed on the New York Stock Exchange (PH), our components and systems comprise over 1,400 product lines that control motion in some 1,000 industrial and aerospace markets.

Parker is the only manufacturer to offer its customers a choice of hydraulic, pneumatic, and electromechanical motion-control solutions. Our Company has the largest distribution network in its field, with over 7,500 distributors serving nearly 400,000 customers worldwide.

### Parker's Charter

To be a leading worldwide manufacturer of components and systems for the builders and users of durable goods. More specifically, we will design, market and manufacture products controlling motion, flow and pressure. We will achieve profitable growth through premier customer service.

### Product Information

Customers seeking product information, the location of a nearby distributor, or repair services will receive prompt attention by calling the Parker Product Information Centre.

The Centre can be called toll free from France, Germany, Austria, Switzerland or the United Kingdom. You will be answered by a Parker employee in your own language. Call Freephone: 00800 27 27 5374 (00800 C PARKER).

#### The Aerospace Group

is a leader in the development, design, manufacture and servicing of control systems and components for aerospace and related high-technology markets, while achieving growth through premier customer service.

#### The Climate & Industrial

Controls Group designs, manufactures and markets system-control and fluidhandling components and systems to refrigeration, air-conditioning and industrial customers worldwide.

#### The Fluid Connectors Group

designs, manufactures and markets rigid and flexible connectors, and associated products used in pneumatic and fluid systems.

#### The Seal Group

designs, manufactures and distributes industrial and commercial sealing devices and related products by providing superior quality and total customer satisfaction.

#### The Hydraulics Group

designs, produces and markets a full spectrum of hydraulic components and systems to builders and users of industrial and mobile machinery and equipment.

#### The Filtration Group

designs, manufactures and markets quality filtration and clarification products, providing customers with the best value, quality, technical support, and global availability.

#### The Automation Group

is a leading supplier of pneumatic and electromechanical components and systems to automation customers worldwide.

#### The Instrumentation Group

is a global leader in the design, manufacture and distribution of high-quality critical flow components for worldwide process instrumentation, ultrahigh-purity, medical and analytical applications.
